

Founder and CEO, Agmonitor Inc. (previously known as PowWow Energy)

Olivier Jerphagnon is a serial entrepreneur with a talent to bring new technology to market. He grew up around farms in Brittany, France and he is an expert in applying data mining techniques to solve practical infrastructure problems. He founded Agmonitor Inc.'s data mining platform to address climate risks at the nexus of Food, Energy, and Water. Prior to that, Olivier was CEO of Monitoring Division Inc., which sold professional services to telecom carriers worldwide using patented data sensing and machine learning technologies from Melbourne University. He started his career in fiber optic networks at Calient Technologies where he built the first 3D-MEMS fiber switch that powers data centers around the world today. He holds 8 patents granted and published more than 30 peer reviewed articles. He was the Primary Investigator on two EPIC funded projects. Mr. Jerphagnon holds a M.S. from UC Santa Barbara and an Engineering Diploma from the Grenoble Institute of Technology, France.
